

Our world grows stronger and healthier through innovation. As part of Baxter's commitment to meeting the needs of diverse patient populations, we created the **Baxter BioScience Grants program**. Focusing on the patient as a priority, the program is designed to support novel therapeutic discoveries. Demonstrating our commitment, in 2009 our program awarded more than \$6 million in grants supporting investigator-initiated research and other scientific initiatives.

We encourage investigators to submit applications for funding to help expand the body of scientific knowledge to benefit healthcare practitioners and their patients worldwide.

Research grants approved by the Baxter Review Committee typically range from \$5,000 to \$125,000; requests exceeding this amount must demonstrate exceptional qualities and address critically important medical issues.

Go to www.BaxterBioScienceGrants.com to apply.

Baxter BioScience Grants

Your Ideas. Our Support.
Advancing Innovation.

Investigator-Initiated Research Grant Types

The Baxter BioScience Grants program offers two distinctive types of research applications:

Clinical Research

Grants that involve the use of therapeutics or medical devices in human study subjects

Non-Clinical Research

Grants for research that does not involve the use of therapeutics or medical devices in human study subjects

Submission Process

The Baxter BioScience Grants process consists of two stages:

Stage 1: Proposal Application

A brief overview application

Stage 2: Full Grant Application

A full detailed application

Please note that while most research applicants submit Stage 1 and Stage 2 sequentially, you may submit a full application to expedite the review process.

Review Process

Baxter Healthcare Corporation is committed to a rigorous process for awarding grants. All grant submissions are reviewed by a multidisciplinary team within Baxter BioScience, led by Global Clinical & Medical Affairs.

Once accepted for review, the proposal is rigorously evaluated on the basis of medical or scientific merit and awarded based on the availability of funds in the review period. For more information about the review process, visit www.BaxterBioScienceGrants.com.

Timelines

Grant requests submitted to Baxter BioScience are reviewed on a quarterly basis.

Grant Application Deadlines
